MENTAL HEALTH AND RECOVERY

RIVEON Mental Health and Recovery, formerly known as *The LCADA Way* and *The Nord Center*

The Ohio Narcotics Intelligence Center (ONIC) has observed the following use of emojis on social media and electronic communications to indicate the marketing, sale, and purchase of illicit narcotics in Ohio. The use of emojis in this manner is a nationwide trend. Emojis used in drug communications commonly refer to the physical, psychological, or physiological characteristics of the drugs. While the presence of these emojis in communications can be an indication of possible drug activity, it is important to remember emojis often have multiple meanings.

GENERAL DRUG REFERENCE

Oxycodone, Hydrocodone, Xanax™, Adderall™, Fentanyl, Ecstasy

Fentanyl, Heroin, Cocaine

OPIOIDS (FENTANYL/FENTANYL ANALOGS/FENTANYL-RELATED COMPOUNDS, HEROIN, CODEINE)

Fentanyl is a potent synthetic opioid narcotic legally manufactured for pain relief; however, fentanyl and fentanyl analogs are being clandestinely produced and brought into the U.S., commonly seen in powder form of various colors including white, gray, and purple. Fentanyl, fentanyl analogs, and fentanyl-related compounds are also seen in counterfeit tablets resembling pharmaceutical prescriptions. Heroin is a highly addictive drug and rapidly-acting opioid derived from the opium poppy plant. Typically found in white or brown powder or a black sticky substance known as black tar heroin. Codeine is a prescription opioid pain reliever commonly combined with other medications as a liquid cough suppressant. The liquid codeine cough syrup may be consumed with other beverages or sweeteners.

Example of Marijuana

THC PRODUCTS

Tetrahydrocannabinol, commonly known as THC, is the psychoactive compound of marijuana. THC extract/concentrates are highly potent, concentrated forms of THC. THC edibles include candy, baked goods, and other foods laced with TCH, the ingredient in marijuana that causes a high, often at high doses. These products are often created to resemble well-known commercial products and candy which can appeal to you or cause accidental ingestion.

HALLUCINOGENS

Psilocybin is a hallucinogenic mushroom. These mushrooms have white/whitish-gray long stems and caps with dark gills on the underside. Available fresh or dried; dried mushrooms can appear darker in color. Ecstasy/MDMA is a synthetic stimulant and psychedelic drug. Known as a party drug, Ecstasy comes in a variety of shapes and vibrant colors, with unique branding and logos. LSD is a potent, odorless and colorless hallucinogen with a slightly bitter taste that is typically available in saturated absorbent paper (e.g., blotter paper, divided into small, decorated squares, with each square representing one dose).
